The AirColdCart A/C system is an automotive type air conditioner for your engine driven golf cart.

- Capable of lowering 95 degree air to 76 degrees !
- Continues lowering system intake air by 20 to 24 degrees depending on humidity, engine rpm, ambient temperature
- System is simple to operate and allows the use of your cart on hot days without suffering the heat and humidity
- High load capacity means you get cold air immediately when you begin running the vehicle
- Works with pedal start as well as key start continuous run vehicles

This system is not an "ice chest" with a fan, it is true air conditioning using refrigeration just as your automobile does. It has been sized and tuned to work with the small engine on your golf cart or utility vehicle.

Club Car Precedent w A/C

Optional Digital Control

Club Car A/C Vents

2013 Yamaha EFI Drive cart w A/C

AirColdCart is the new gold standard in comfort for golf carts, OHV, and street legal LSV vehicles. Designed to provide the same level of comfort as we've all grown to expect in our automobiles from these light vehicles. Why suffer when you can have true A/C ?

Be the first in your neighborhood to have real A/C on your custom cart.

We bet you'll get more enjoyment and attention with it you did with your first !

AirColdCart systems provide:

- Dramatic air temperatures reductions (same as an automobile)
- Removes humidity, doesn't add moisture like "ice chest" systems
- Large capacity for immediate, cold air

AirColdCart systems are:

- Easily installed by your golf cart technician
- Complete systems that are designed specifically for each model of vehicle providing true bolt on performance
- Designed with durability to last using automotive grade components
- Tuned to the specific application for optimal performance

AirColdCart systems are currently available for:

- Club Car Precedent 2004 to present models
- Yamaha Adventure Sport and Drive EFI models 2012 to present
- More applications coming soon !
